Education

University of Wisconsin-Madison Sep 2023 – Dec 2025
Master of Science (M.S.) in Computer Science *GPA: 3.85*

National Tsing Hua University Sep 2020 – Jan 2022
Post-Baccalaureate in Computer Science *GPA: 3.88*

Tunghai University Sep 2014 – Jul 2018
Bachelor of Business Administration (B.B.A.)

Skills

Languages: Python, Go (Golang), Java, C++, SQL
Frameworks & APIs: React, Node.js, FastAPI, Spring, gRPC, RESTful APIs
Databases: PostgreSQL, MySQL, Supabase
Infrastructure & Tools: Docker, Kubernetes, Argo CD, GitHub Actions, AWS, Linux, k6

Experience

NeuraSignal – Software Engineer (Contract) Oct 2026 – Present
Ultrasound Simulation Platform – *Python, C++*
- Developing collision and stochastic Doppler simulators for a research-grade medical ultrasound simulation platform on a 4-engineer team, spanning DSP, numerical validation, and automated testing

AI/ML platforms – Open Source Contributor Jan 2026 – Present
Ray, KubeRay, Apache Airflow – *Go, Python, TypeScript, GitHub Actions, Kubernetes*
- Merged **11** PRs across Ray, KubeRay, Apache Airflow, and Commitizen, spanning operator tests, CI automation, docs, React UI fixes, and Python CLI features
- Traced up to **55s** of per-worker autoscaling delay in KubeRay to an under-provisioned init container; opened a fix that mirrors the Ray container's CPU/memory, with unit tests (in review)
- Improved KubeRay CI reliability: fixed a flaky e2e test caused by 409 conflicts with the controller, and added a stale issue/PR workflow validated with dry runs on a fork
- Fixed a React duplicate-key rendering bug in the Airflow web UI and migrated connection metadata to declarative YAML across **3** provider packages

Digital Aid Seattle – Software Engineer May 2026 – Oct 2026
Scheduling Platform – *TypeScript, Next.js, Supabase (PostgreSQL/Auth/Edge Functions)*
- Built a full-stack scheduling tool that automates student grouping via timezone-aware availability matching, replacing manual spreadsheet workflows for 3 instructors
- Designed multi-tenant data isolation with Supabase Row Level Security, enabling instructors to independently manage class data on a shared platform

IBM – Software Engineer Intern Jul 2025 – Aug 2025
Containerization – *C++, gRPC, CORBA, Bash, Docker, Kubernetes, Argo CD, Linux, k6*
- Built a C++ CORBA-to-gRPC bridge that let Kubernetes health-check a closed-source legacy service used in semiconductor fabs, automating a previously manual validation workflow (~**60%** faster)
- Deployed the legacy C++ services on Kubernetes with Argo CD Blue-Green GitOps releases, replacing manual deployments in the team's modernization proof of concept
- Built a reusable k6 gRPC load-testing suite simulating **1,000+** concurrent users, identifying the load level at which latency spiked; demoed the end-to-end prototype to the team

Projects

Video Chat Platform – *Go, Fiber, TypeScript, React, WebRTC, PostgreSQL* 2026
- As the sole engineer, shipped BuckyChat, a campus-only video chat platform for verified UW-Madison students, from zero to production, reaching **70** student sign-ups
- Architected peer-to-peer WebRTC media over a lightweight Go signaling server with Cloudflare TURN fallback; k6 load tests sustained **200** concurrent WebSocket sessions and **27,000+** connections at **100%** handshake success
- Secured access with @wisc.edu signup allowlisting, JWT-validated WebSocket sessions, and per-user rate limiting
