EDUCATION

University of Wisconsin-Madison <i>M.S. in Computer Science</i>	Madison, WI 2025
National Tsing Hua University <i>Post-Baccalaureate in Computer Science</i>	Taiwan 2022
Tunghai University <i>B.B.A. in Business Administration</i>	Taiwan 2018

SKILLS

Languages: Python, Java, C++, JavaScript, HTML, CSS, SQL	Databases: PostgreSQL, MySQL, MongoDB
Full Stack: Django, Spring, React, RESTful, GraphQL, gRPC	Data & Streaming: Kafka, Airflow
Infrastructure: Docker, Kubernetes, CI/CD, GitOps, Argo CD	Cloud: AWS, GCP, Azure

EXPERIENCE

International Business Machines Corporation (IBM) <i>Software Engineer Intern (Summer)</i>	Jul 2025 – Aug 2025 Taiwan
– Built a production C++ middleware integrating legacy CORBA APIs with modern deployment infrastructure, reducing validation time by 60%. – Migrated legacy C++ services to Kubernetes, introducing Blue-Green deployments to reduce operational overhead by 30%. – Developed a distributed load testing tool simulating 1,000+ concurrent users against gRPC services to identify performance bottlenecks. – Implemented CI/CD and GitOps workflows using Azure DevOps and Argo CD, enabling zero-downtime deployments and reducing release time by 25%.	
Institute for Information Industry <i>Software Engineer Intern</i>	Jan 2022 – Aug 2022 Taiwan
– Developed an e-commerce backend using Java, Spring Boot, and MySQL, building RESTful APIs for order, inventory, and payment services. – Optimized database queries and schema design, reducing API latency by 10%. – Implemented OAuth2 authentication with Spring Security and Google Identity, enabling secure third-party login and enforcing role-based access control.	

PROJECTS

Apache Airflow <i>Open Source · Python, TypeScript, React</i>	2026
– Contributed to Apache Airflow 3.0, refactoring the React pagination component to fix ellipsis rendering logic and improve navigation for large DAG datasets.	
Scalable Event Networking App <i>TypeScript, React Native, Python, FastAPI, Supabase</i>	2026
– Built a real-time event discovery platform using React Native and FastAPI, supporting map-based event creation and visualization. – Improved map interaction performance by implementing coordinate system (CRS) conversions and UI micro-animations, reducing perceived selection latency by 30%.	
AI-Driven Database Schema Expansion <i>Python, Generative AI</i>	2025
– Built a retrieval pipeline using GPT-3.5-turbo to expand abbreviated database column names, achieving 76–88% accuracy across multiple relational datasets.	
Commitizen <i>Open Source · Python, Pydantic, Pytest</i>	2025
– Contributed to Commitizen CLI by implementing configurable commit body line limits (50/72 rule) and expanding CLI test coverage with Pytest to improve release reliability.
